SEARCH

A data breach exposes 150,000 security cameras used by organizations around the world, including Tesla and Cloudflare. State-sponsored hacking groups exploit Microsoft Exchange vulnerabilities. A fire in a French data center belonging to hosting company OVH affects millions of websites, including some prominent WordPress services like Imagify and WP Rocket. WordPress 5.7 was released this week with many new features. A zero-day vulnerability was listed for sale in a new way, as an NFT on the OpenSea NFT marketplace.

Here are timestamps and links in case you'd like to jump around, and a transcript is below:

0:19 Defiant is hiring, we have great benefits!
1:03 Security startup Verkada hack exposes 150,000 security cameras
3:55 More hacking groups join Microsoft Exchange attack frenzy
6:46 OVH data center burns down knocking major sites offline
9:48 WordPress 5.7 Released; Chloe's HTTP > HTTPS demo
13:19 A Hacker Was Selling a Zero-Day Exploit As an NFT

Episode 108: Hack Exposes 150,000 Security Cameras at Tesla, Cloudflare and Others

Fleet Telemetry
Virtual Keys
Announcements
Support

Note: account creation requests can be automatically rejected if the application name already exists.

Create Application and Access Dashboard

Step 3: Generate a Public/Private Key Pair

A public key must be hosted on the application's domain before making calls to Fleet API.

The key is used to validate ownership of the domain and provide additional security when using [Vehicle Commands](#) and [Fleet Telemetry](#).

To create a private key, run:

```
openssl ecparam -name prime256v1 -genkey -noout -out private-key.pem
```

Then, generate the associated public key:

```
openssl ec -in private-key.pem -pubout -out public-key.pem
```

This public key should be available at:

```
https://developer-domain.com/.well-known/appspecific/com.tesla.3p.public-key.pem
```

Note: private-key.pem needs to be kept secret and should not be hosted on a domain.

Step 4: Call the Register Endpoint

Next, generate a [partner authentication token](#) and use it to call the [register endpoint](#) to complete registration with Fleet API. Note: The register call needs to be completed in each [region](#) of operation.

Next Steps

Now that the register endpoint has been called, Fleet API is configured and ready to receive requests.

Next steps to take:

- Selecting the proper authentication token type and generating tokens. [Authentication overview](#).
- Pairing a public key to a vehicle. This is required to send [Vehicle Commands](#) and setup [Fleet Telemetry](#).
- Configuring [Fleet Telemetry](#) which streams data directly to a server.
